

## The quartz clock for chess game

The game clock adopts the construction of the hand type quartz electric with the time starting button, it is visual and convenient to use it when timing in the game. It is accurate and the day error is less than one second. It is applicable in all kinds of games.

Power supply: D.C1.5VR6P

### The using method

#### 1. The operation method of the time button

Put the battery, then press the left button. The left clock stops timing and the right starts timing. Contrarily, press the right button and the right clock stops timing and the left clock starts timing. Press the two side at the same time (that is to say that the buttons at the two sides are on the same horizon), the two clocks stop timing.

#### 2. The hand zero position adjustment

The second hands of the two clocks can be adjusted to 12 o'clock (zero position) successively by operating the buttons on the two sides in turn. Stir the hour hand respectively, the minute hand is to the 12 o'clock according to the hands probes arrow. Judge the minute hand's zero position when the small red flag rises to the 12 o'clock towards the right. The scale to which the minutes hand points is the zero position when the small red flag falls freely.

### The maintenance

1. The game clock should be prevented from touching the corrosion product, the sun and the rain, touching the strong magnet field.
2. Bfore game, the battery should be checked. If the battery is not used for a long time, it should be taken out and put in the dry shadow and cool、ventilated place.
